

Bermuda Shipwreck Certificate

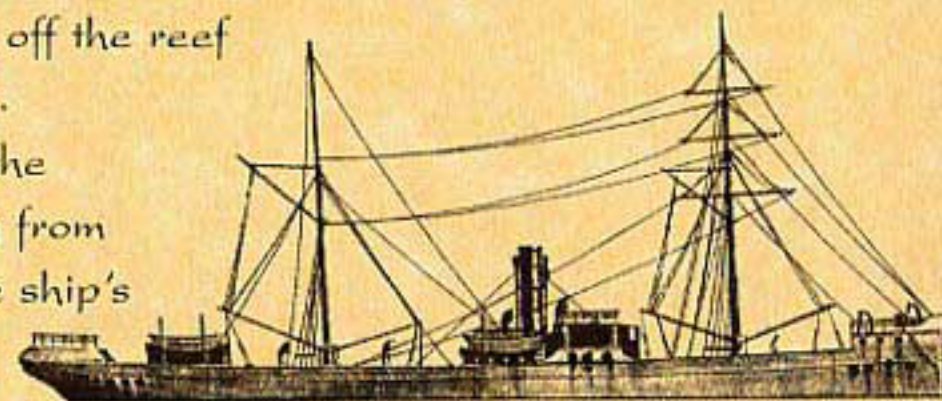

This official Bermuda document certifies that on the date of _____

Bermuda visitor _____ successfully dived and explored the

Minnie Breslauer

The Minnie Breslauer is one of the unluckiest ships to sink in Bermuda waters. She was an English steamer built in 1872. The 300 foot steel hulled freighter was on her maiden voyage between Portugal and New York, loaded with a cargo of wine, dried fruit, bales of cork and 160 pound lead ingots. Unfamiliar with Bermuda reefs, the captain edged his new ship toward the shore, where she collided with a submerged reef and ground to a halt. An attempt to back the ship off the reef only resulted in it sinking.

The wreck is one mile off the south shore in depths ranging from 35 to 70 feet. Still visible is the ship's huge steam boiler, parts of the wheelhouse, the ship's steering quadrant and a four bladed propeller.
